US-09-659-791A-23/c

Sequence 23, Application US/09659791A

Patent No. 6383808

GENERAL INFORMATION:

APPLICANT: Brett P. Monia

APPLICANT: Susan M. Freier

TITLE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION

FILE REFRENCE: RTS-0156

CURRENT APLICATION NUMBER: US/09/659,791A

CURRENT FILING DATE: 2000-09-11

NUMBER OF SEQ ID NOS: 90

SEQ ID NO 23

LENGTH: 20
                                                                                                                                                                                                                                                                                                 RESULT 25

US-09-659-791A-48/C
Sequence 48, Application US/09659791A
Sequence 48, Application US/09659791A
Patent No. 6383808
GENERAL INFORMATION:
APPLICANT: Brett P. Monia
APPLICANT: Susan M. Freier
TITLE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION
TITLE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION
CURRENT APPLICATION NUMBER: US/09/659,791A
CURRENT FILING DATE: 2000-09-11
NUMBER OF SEQ ID NOS: 90
SEQ ID NO 48
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 50

GENERAL INFORMATION:

APPLICANT: Brett P. Monia

APPLICANT: Susan M. Freier

TITLE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION

TITLE OF INVENTION: ANTISENSE WOOVLATION OF CLUSTERIN EXPRESSION

TITLE OF INVENTION NUMBER: US/09/659,791A

CURRENT APPLICATION NUMBER: US/09/659,791A

CURRENT FILING DATE: 2000-09-11

SEQ ID NO 71

Sequence 78, Application US/09659791A

Patent No. 6183808

GENERAL INFORMATION:
APPLICANT: Busan M. Freier
TITLE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION
FILE REPERENCE: RTS-01.6
CURRENT APPLICATION NUMBER: US/09/659,791A

CURRENT FILING DATE: 2000-09-11
NUMBER OF SEQ ID NOS: 90
SEQ ID NO 78
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                APPLICANT: Brett P.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 944, Application US/08757024

Patent No. 6025339

GENERAL INFORMATION:
APPLICANT: Nyce, Jonathan W.
TITLE OF INVENTION: METHOD OF TREATMENT FOR ASTHMA
NUMBER OF SEQUENCES: 952
CORRESPONDENCE ADDRESS:
ADDRESSEE: BELL, SELTZER, PARK & GIBSON
STREET: P.O. Drawer 34009

CITY: Charlotte
STATE: No. 6025339th Carolina
COUNTRY: USA

ZIP: 28234
                                                                                                                                                                                                                                                       CAPPUTER TEADABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/757,024
FILING DATE: 26-NOV-1996
CLASSIFICATION: 514
ATTONENY/AGENT INFORMATION:
NAME: Sibley, Kenneth D.
REGISTRATION NUMBER: 31,665

Sequence 75, Application US/09736116
Patent No. 6727085
GENERAL INFORMATION:
APPLICANT: Sejersgard, Tina
APPLICANT: Mikkelsen, Frank
TITLE OF INVENTION: Subtliase variants having an improved wash peformance on egg stair
FILE REFERENCE: 6108.410
CURRENT APPLICATION NUMBER: US/09/736,116
CURRENT FILING DATE: 2001-05-24
NUMBER OF SEQ ID NOS: 105
SOFTWARE: Patentin version 3.0
SEQ ID NO 75
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

MOLECULE TYPE: other nucleic acid
DESCRIPTION: third strand derived from dystrophin
DESCRIPTION: sequence region in Seq ID No. 586124431
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-034-205-67

Sequence 67, Application US/09034205

Patent No. 6194199

PAPELICANT: Lyamichev, Victor I.

APPLICANT: Brow, Mary Ann D.

APPLICANT: Brow, Mary Ann D.

APPLICANT: Ners, Lauce P.

TITLE OF INVENTION: TARGET-DEPENDENT REACTIONS USING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RELEVANT RESIDUES IN SEQ ID NO: 32 :FROM 1 TO 16 US-08-173-489C-32
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         COUNTRIE USAR

APPLICANT: Fordent, James
APPLICANT: Fordent, James
APPLICANT: Brow, Mary Ann
APPLICANT: Brow, Mary Ann
APPLICANT: Brow, Mary Ann
APPLICANT: Dahlberg, James
TITLE OF INVENTION: Target-Dependent Reactions Using Structure-Bridging Oligonucleoti
FILE REFERENCE: FORS-04012
CURRENT APPLICATION NUMBER: US/09/402,618B
CURRENT APPLICATION NUMBER: PCT/US98/03194
PRIOR APPLICATION NUMBER: PCT/US98/03194
PRIOR APPLICATION NUMBER: PCT/US98-03194
PRIOR PLING DATE: 1998-05-05
SOFTWARE: Patentin version 3.0
SSOTTWARE: Patentin version 3.0
